ACKNOWLEDGMENT

The Drug Administration and Control Authority (DACA) of Ethiopia would like to extend its gratitude to the World Health Organization (WHO) for meeting all the financial expenses associated with the execution of the revision workshop and printing of this list. It also thanks all participants of the workshop for their valuable contribution.

First edition	1980
Second edition	1989
Third edition	1996
Fourth edition	2002

FOREWARD

The provision of complete health care necessitates the availability of safe, effective and affordable drugs of the required quality, in adequate quantity at all times. Moreover, the available drugs must be prescribed, dispensed and used by the patient rationally.

The Ethiopian drug policy which was issued on November, 1993 has reaffirmed the commitment of the Ethiopian Government to this principle.

To realize this objective it would be necessary to select drugs which are required for the prevention, diagnosis, treatment and/or mitigation of diseases which affect the majority of the Ethiopian people and classify them by level of health care.

The Ethiopian National Drug List is now revised for the fourth time in the light of the above principle and also on the basis of the latest development in the fields of medicine and pharmacy.

This fourth edition of the national drug list is categorized by five levels of health care following the existing four-tier health care delivery system of the country and part of the old six-tier system (i.e. health stations which are being phased-out).

Categorization of the list was also done after considering important factors such as functions/services, diagnostic facilities, level of training of health personnel at each level of health care unit and other drug related factors.

It gives me a great pleasure to introduce this edition of the list to all beneficiaries, which is the fruit of the joint-effort of the staff of the Drug Administration and Control Authority as well as the participants of the review workshop.

I hope that the national drug list as well as its sub-lists will serve as useful guides for procurement, distribution and prescription of drugs in the country.

Finally, I would like to express my gratitude to all those who have directly or indirectly contributed to the revision, preparation and printing of the list. I also call upon your continued support to keep the list up-to-date by forwarding comments and suggestions to the drug administration and control Authority.

Haileselassie Bihon

General Manager of DACA

INTRODUCTION

The third edition of the Ethiopian national drug list is now revised after five years of use. The purpose of this fourth edition of the list remains the same to provide the various categories of health workers and related institutions with up-to-date list of drugs which can be imported or locally produced subject to compliance with the registration requirements of the regulatory body.

The draft of the revised version of the list was initially prepared by two adhoc committees composed of members drawn from the Drug Administration & Control Authority and then presented for deliberation to a three-day workshop. The participants of the workshop were specialists in the various disciplines of medicine, representatives of teaching schools. Professional associations, health bureaus of all regions, relevant departments of the Ministry of Health, Research institutions, consumer associations, and other related organizations. The final revised version of the list was then prepared by a technical committee designated at the workshop.

In the course of reviewing the previous edition of the list, drugs which are obsolete, less effective and with low benefit/ risk ratio have been deleted while drugs with better safety and efficacy profile have been included. In the preparation of this edition of the list, the pharmacological therapeutic classification system used in the previous edition is still maintained.

This fourth edition of the national drug list is further classified by five levels of health care envisaging the four-tier health care delivery system of the country as well as part of the old six-tier system (i.e. health station which are being phased-out).

The five sub-lists include list of drugs for:

Community Health Posts headed by primary health workers;

- Health Stations led by health assistants,
- Health Centers headed by Health Officers (B.Sc);
- District Hospitals headed by General Practitioners (M.D) and;
- Zonal Hospitals having specialist physicians in the various fields of medicine.

Thus, Users of the list are advised to refer to the sub-list which is relevant to the level of service they render.

The development of a National Drug List is an ongoing process, Hence, the list will be subjected to continuous deletion and inclusion: as the pharmaceutical industry introduces new medicines, they will be critically evaluated in terms of, interalia, their potential to improve safety and efficacy, better patient compliance and other drug qualities.

Therefore, evidence, based comments and suggestions are welcome and can be sent to the Drug Administration and Control Authority of Ethiopia P.O. Box 5681. Addis Ababa, Ethiopia.
